ALL ABOUT RUNNING

# INTRODUCTION INTO RUNNING WORLD

## WHEN RUNNING BECAME POPULAR,...

- After Bill Bowerman published book „jogging“ in 1966, running became one of most popular sport in „Western world“.
- Running shoe industry;
- Coaching of non elite runners
- Running groups
- Specific knowledge

**RUNNERS  
4ALL**

**European  
Students  
Run**

Co-funded by  
the European Union

ALL ABOUT RUNNING

# INTRODUCTION INTO RUNNING WORLD

## BENEFITS OF RUNNING (PHYSICAL ACTIVITY):

- Better health status (heart disease, blood pressure, weight management, bone density,...);
- Better sleep (brain function, memory,..);
- Better mental health and toughness (discipline, self-confidence,...);
- Good for social aspect of life;
- Compared to some other sports is not expensive,...

**RUNNERS  
4ALL**

**European  
Students  
Run**

Co-funded by

ALL ABOUT RUNNING

# INTRODUCTION INTO RUNNING WORLD

## COACHING RECREATIONAL RUNNERS:

- BASIC KNOWLEDGE about running and training principles;
- GOOD IN COMUNICATION (listen, learn, advice)
- EMOTIONAL INTELIGENCE (different people needs diffrenter aproach);
- You need to be committed to learn new stuff;
- Toy need to be able to focus on long term goals

**RUNNERS  
4ALL**

ALL ABOUT RUNNING

# HOW TO SET GOALS WITH RUNNERS

- First, it's necessary to find out what their experiences in sports are, what activities they were involved in during their youth
- Secondly, it's important to discuss with them what they wish to achieve through running training
- Before starting, we always check their health status (injuries, allergies, asthma, etc.)
- After this conversation, we need to assess the participant's current physical condition

**RUNNERS  
4ALL**

**European  
Students  
Run**

Co-funded by  
the European Union

ALL ABOUT RUNNING

# HOW TO SET GOALS WITH RUNNERS

- For those who are not yet running, we do not conduct tests. Running tests are intended for healthy individuals capable of running continuously for 30 minutes without any issues. If they are unable to do so, we consider them beginners and adopt a different approach for them. (we will discuss this topic later)
- For all individuals capable of greater running effort, we organize a field test to measure their performance over a specific distance.

**RUNNERS  
4ALL**

**European  
Students  
Run**

Co-funded by

ALL ABOUT RUNNING

# HOW TO SET GOALS WITH RUNNERS

- Now you have knowledge about their physical performance
- Together you can set individual goals which are:
  1. Specific
  2. Measurable
  3. Achievable
  4. Relevant
  5. Time-bound

Example: Half marathon race pace is around 30"/km slower than 5 km race pace

**RUNNERS

ALL ABOUT RUNNING

# HOW TO PLAN ACTIVITIES FOR RUNNERS

- You will have one or two sessions per week with runners
- They still need to do some activities at home

## **RULES:**

- **Training should not be too intensive;**
- **Consistency is most important;**
- **Do not overachieve;**
- **It is a long term process;**
- **Go step by step**

Runners need a program they can follow in their spare time!

ALL ABOUT RUNNING

# WHAT IS ENDURANCE

- Endurance is resistance to fatigue.
- In sports, endurance means the body's resistance to fatigue during prolonged physical activity.
- Endurance is the ability to perform long-lasting activities without a decrease in effectiveness.

ALL ABOUT RUNNING

# Functional capabilities of the organism

- a)** the efficiency of metabolic processes that produce energy for movement
- b)** the rate of removal of by-products of metabolic processes

Cardiovascular and respiratory function – the ability of the heart, blood vessels, and lungs to supply oxygen to muscles.

ALL ABOUT RUNNING

# TYPES OF ENDURANCE

## General vs. Specific Endurance

**General endurance:** The ability to perform any physical activity for a long time, regardless of the sport (e.g., running, swimming, cycling).

**Specific endurance:** The ability to maintain performance in a particular sport or movement (running endurance for runners, cycling endurance for cyclists,...)

## Aerobic vs. Anaerobic Endurance

**Aerobic endurance:** The ability to perform low- to moderate-intensity activity for a long period (with sufficient oxygen supply) – activities longer than 2 min!

► Example: long-distance running, cycling, swimming.

**Anaerobic endurance:** The ability to sustain high-intensity efforts for a short period (without sufficient oxygen, leading to lactate accumulation) – for activities up to 1 - 2 min!

► Example: 300m sprint, repeated high-intensity efforts in team sports.

## Muscular Endurance

The ability of a muscle or group of muscles to repeatedly contract against resistance over a period of time.

► Example: doing many repetitions of a bodyweight exercise like push-ups or squats.

ALL ABOUT RUNNING

# BORG RATING (RPE)

RPE	Perceived Effort	Example Description
6	No exertion at all	Resting, lying down
7–8	Extremely light	Very easy walk
9–10	Very light	Light effort, warm-up pace
11–12	Light	Comfortable, can talk easily
13–14	Somewhat hard	Moderate effort, slightly breathless
15–16	Hard	Breathing heavily, difficult to talk
17–18	Very hard	Very tiring, near maximum effort
19	Extremely hard	Can't continue much longer
20	Maximal exertion	Absolute maximum effort

ALL ABOUT RUNNING

# ENDURANCE DEVELOPMENT METHODS

## Contribution of energy systems to time of movement

There are two important work times that mark a shift in emphasis from one of the three energy systems to another:

**10 seconds**—After 10 seconds of intense muscular activity the energy system providing the majority of the energy shifts from the anaerobic alactic to the anaerobic lactic system.

**1 minute**—After about 1 minute of intense activity the shift is away from the anaerobic lactic system to the aerobic system.

ALL ABOUT RUNNING

# ENDURANCE DEVELOPMENT METHODS - INTERVAL METHODE

EXTENSIVE or AEROBIC INTERVAL TRAINING

INTENSIVE (LONG AEROBIC INTERVAL TRAINING)

- 5 PARAMETERS:
- INTERVAL LENGTH (200, 400, 1000 m)
- RUNNING SPEED (4:30/km; 5:00/km, ...)
- NUMBER OF REPETITIONS (6, 8, 10, 12×)
- REST DURATION (1', 3')
- NATURE OF REST (walking, slow jogging, standing still, ...)

ALL ABOUT RUNNING

# ENDURANCE DEVELOPMENT METHODS - FARTLEK

FARTLEK IS COMBINATION OF CONTINUOUS METHODE AND INTERVAL METHODE

Fartlek training involves alternating between easy running and faster efforts, but unlike structured intervals, it's more unstructured and intuitive.

- Mix of aerobic and anaerobic training
- No strict rules on distance or time
- Can include sprints, jogs, and steady runs
- Often done outdoors using natural terrain and landmarks

VERY USEFULL METHODE FOR GROUP COACHING!!!

ALL ABOUT RUNNING

# HOW TO TRAIN – ALL INFORMATIONS COMBINED

**EASY RUN, JOGGING (Z1)** – very slow run, short stride, high cadence, on soft surface if possible!

50 – 60% of HRmax / approx. 90 seconds per km slower than 5 km test pace

**EASY RUNS, LONG RUNS (Z2)** – They should start slowly and may become faster toward the end. Pay attention to step frequency and run as much as possible on soft, varied terrain!

60–70% of HRmax / approx. 80–40 seconds per km slower than your 5 km test pace

**RUNNERS  
4ALL**

**European  
Students  
Run**

Co-funded by  
the European Union

ALL ABOUT RUNNING

# HOW TO TRAIN – ALL INFORMATION COMBINED

**AEROBIC RUNS (Z3)** – Moderately fast running, approximately the pace at which you could run a marathon. Preferably on soft surfaces!

70–80% of HRmax / approx. 70–30 seconds per km slower than your 5 km test pace

**STEADY STATE + LACTATE THRESHOLD (Z4)** – Maximum steady state, comfort zone. Recreational runners spend the most time in this zone! Training in this zone is pleasant, and you feel good afterward, like you've done something beneficial for yourself.

At lactate threshold, you feel like you're pushing, but in control. It's hard but steady, the sweet spot where endurance and intensity meet for performance gains.

Training in this zone should be a progression from the lower / aerobic zones! Run on varied, soft terrain.

80–90 % of HRmax / approx. 30–15 seconds per km slower than your 5 km test pace.

TEMPO RUN; PROGRESSIVE RUN; EXTENSIVE INTERVAL TRAINING; FARTLEK

ALL ABOUT RUNNING

# BASIC PRINCIPLES OF SPORT EXERCISE

- PRINCIPLE OF INDIVIDUALIZATION (A good training program follows the principle of individualization, adapting to each athlete's needs and characteristics)
- PRINCIPLE OF PROGRESSION (Training must proceed gradually and systematically, with increasing load. Advancing too quickly increases the risk of overtraining or injury)
- PRINCIPLE OF VARIATION (Introducing changes in training (exercises, environment, formats) prevents monotony and mental fatigue, and enhances adaptation)
- PRINCIPLE OF SYSTEMATIZATION (According to the principle of systematic training, the development of athletic performance requires structured and progressive planning over time)

ALL ABOUT RUNNING

# BASIC PERIODIZATION FOR LM2025

- From 19.5.2025 – 19.10.2025 is 22 weeks
  - A bit less than half a year
  - Enough time to prepare beginners to run 10 km
  - Enough time to prepare runners for 21,1 km

20 weeks of training

12 weeks of basic aerobic training

+

8 weeks of specific training for running distance

# BASIC PERIODIZATION FOR LM2025

12 weeks of basic aerobic training includes:

- Mostly aerobic running (Z1, Z2, Z3)
- Running technique
- Strength exercises

8 weeks of specific training includes:

- long runs
- specific race pace sessions
- tempo runs
- interval training
